

MOVING OVERSEAS

WORLDWIDE CAR SHIPPING

In many cases when moving your vehicle overseas, it can be loaded with your personal effects into an FCL container.

Alternatively, Roll On, Roll Off (known as RO-RO) may be the best and most competitive option.

If you choose to take a car overseas with you, firstly check that your car meets the arrival country's environmental and safety standards. Failure to do this can be expensive and in some cases your automobile may be impounded.

Your car will be collected by trailer, transferred to the port and driven onto the vessel.

At destination the vehicle will be processed through customs and either released to your order or delivered to your new home.

The vehicle must be in a running condition, and throughout the transfer inspections will take place to monitor its condition.
